

Coil Heaters

The BMS Coil Heaters are of a square element design with the termination and lead wires at one end of the sheath. The larger diameter coil allows the integration of an internal thermocouple and higher watt densities. The nickel sheath is annealed at the transition from the heater to the leads which allows you to carefully form the lead exit to the required application.

I.D.	L Length	Voltage	Wattage	Leads	Lead Exit	Internal T/C?	DME Equivalent	BMS Part #	Price
